

Create a **Student** class with mentioned attributes

Student -> attributes are **name, id, age, batch_id, subjects**: [Subject]

[subject is an array or lists of Subject]

For eg:- subject = ['physics', 'maths', 'chemistry', 'biology']

Create a **Subject** class with mentioned attributes

Subject -> attributes are **id, name**

Methods in Subject class are :- Add_subject, Remove_subject, Show_all_subjects

Students can enroll to a subject -> method add_subject (use append() to subject list)

Students can remove from a subject -> remove_subject (use del or remove() to subject

list)

Students can view all enrolled subjects -> show_all_subjects. (display the list)
