

# Coding Challenge - Week 12 Day 1

New day, New challenge. Today we had wired up with the search bar component along with some concepts regarding re-rendering. Please complete the same in your app, along with the feature of pagination. Render two buttons (Prev Page, Next Page) only if it satisfies the following conditions.

If there exists a `prevPageToken` property, then show the Prev Page button.  
If there exists a `nextPageToken` property, then show the Next Page button.

On clicking the above said buttons, it should additionally pass that particular page token to your request and fetch the new videos and render the same.
