

Assignment - Week 11 Day 4

Another day, another React/redux app. Build a small application which fetches random DAD JOKES. Use [this](#) URL for the data. Some possible features you can think of are the ability to search a particular joke, get a bunch of jokes. Keep it simple and pragmatic but make sure you are using custom CSS (If possible SCSS). Do not use any front end framework, at least now to sharpen your CSS skills.
