

# Coding Challenge - Iterators and Generators

---

Get the [data.json](#) file, parse into an object, and make it an iterable. (Don't change the object data type into an array)

Make it an iterable using

1. Iterators
2. Generators

When that object is passed inside a FOR OF loop, I should get the output of each item as the following pattern.

Post Id: 1 Title: Some title

Post Id: 2 Title: Some other title

And so on ...

Hint: Use `Object.keys` and `Object.values` and `Object.entries`, Refer them [here](#).
