Assignment - Week 12 Day 3

New day, new assignment. In one of our lectures, we were discussing Brad Traversy's new Youtube video regarding the Breaking Bad API [here](). What I want you to do is, come up with an entirely different styled application utilizing React and Redux, but with the same features he had demonstrated. This will allow you to learn more about lifecycle hooks as well as Redux state management. Just come up with your own architecture in terms of reducers as well as actions.
